## STERI-7

PROTECTION BETWEEN CLEANS

**There are simple things you can do to combat the infection.**

**Cleanliness and commonsense.**

The Flu virus is spread the same way as the common cold. It is enclosed within the millions of tiny droplets that come out of the nose and mouth when someone coughs or sneezes. These droplets can spread as far as 1 metre and can hang in the air for a while before landing on a surface.

The Flu virus can survive for up to 24 hours on a surface so anyone who touches these infected surfaces can spread the virus by touching anything else. It can also be transmitted by infected people who cough or sneeze without covering their face or into their hands and then touch other people or objects before washing their hands.

People usually become infected by picking up the virus on their hands from contaminated objects and then placing their hands near their mouth or nose. It is also possible to breathe in the virus if it is suspended in airborne droplets.

Good hygiene, such as hand washing and cleaning, is the most effective way of slowing the spread of flu.

# STERI-7 XTRA

STERI-7's biocidal Hand Rub, Hand Wash and Wipes are powerful weapons in the constant battle against germs, micro-organisms and pathogens.

They are critical to the STERI-7 philosophy of BREAK, TREAT, PREVENT. Used regularly, they help BREAK the chain of infection often found in everyday life, TREAT the pathogens by killing them at source and PREVENT them reappearing through the unique STERI-7 Reactive Barrier Technology.

The Hand Wash brings you an extraordinarily high-level of hygienic protection Dermatologically tested and gentle on the skin yet so potent it kills Clostridium Difficile spores, Influenza A (H1N1), MRSA and many other harmful pathogens.

The Hand Rub and the Wipes are perfect in situations where water is not available and like the Hand Wash they also eliminate pathogens in seconds.

Thanks to STERI-7's Reactive Barrier Technology, all three products will keep you protected for up to three hours after they're used.

STERI-7 Hand Rub, Hand Wash and Wipes are 100% organic, non-perfumed and designed to re-moisturise the skin after use.

STERI-7 XTRA HAND RUB & WASH

STERI-7 XTRA  
READY TO USE &  
LEMON READY TO USE

STERI-7 XTRA  
READY TO USE WIPES

## Features and benefits

Motor Specification	
Blower Size	121mm
Rated Voltage	230V 50hz
Max. Input Power	1250w
Max. Airflow	48.0 l/s
Max. Vacuum	28 kPa
Max. Air Power	530w
Max. Efficiency	48.50%
Particle size	10-50µ
Insulation Class	F

Applying STERI-7 using the ULV Biomister causes the minimum of disruption and downtime. It can be used to treat large or small areas, hard to reach ceilings or walls all in a short space of time. After cleaning an area thoroughly, use STERI-7 ULV Biomister to kill up to 99.9999% of harmful superbugs such as Norovirus, Influenza A (H1N1), E.Coli, Salmonella, Legionella and many more.

The process works by filling a room with a fine mist of 10 micron particles (1 micron = 1 millionth of a metre or 1 thousandth of a millimetre). As the particles settle onto all surfaces, even the ones never touched by conventional cleaning, STERI-7 kicks into action killing Bacteria, Spores and Viruses fast.

Bio-misting is part of STERI-7's BREAK, TREAT, PREVENT ideal to achieve full Biosecurity.

## REMEMBER TO –

### Always cover coughs and sneezes with a tissue or face mask

The Flu virus is spread by particles people expel when they cough or sneeze. So, they must cover their nose and mouth with a tissue because they can dispose of it without passing on infection.

### Always make sure you wash your hands properly

You should ALWAYS wash your hands before you...

- Prepare or eat food
- Treat a cut or a wound
- Visit a hospital ward

You should ALWAYS wash your hands after you...

- Use the bathroom
- Handle uncooked foods, especially raw meat, poultry or fish
- Blow your nose, cough or sneeze
- Touch animals or animal waste
- Handle rubbish
- Change a nappy
- Work/play in the garden
- Touch a sick or injured person
- Visit a hospital ward

### Always try to avoid groups of more than 4 people

People with the Flu virus can infect others even before they show symptoms themselves.

### Always clean and disinfect your surfaces, handles and other areas you often touch

The Flu Virus can survive on a surface for as long as 24 hours without re-colonising.

### Always try to avoid contact with other peoples possessions and equipment.

## STERI-7 XTRA HAND RUB & WASH

BACTERICIDAL, VIRUCIDAL,  
FUNGICIDAL, SPORICIDAL

KILLS Influenza A (H1N1)

WORKS IN SOILED CONDITIONS

NON ALCOHOL

100% ORGANIC

NON IRRITANT

NON PERFUMED

NON FLAMMABLE

RE-MOISTURISES THE SKIN

STAYS ACTIVE FOR UP TO 3 HOURS

REACTIVE BARRIER TECHNOLOGY  
PROTECTION BETWEEN CLEANS
